

REPLENISHING ARTSAKH'S FOOD RESERVES

PROJECT SUMMARY

The blockade of Artsakh by Azerbaijan and the threat of other such situations create the need to replenish the state food reserves for Artsakh's 120,000 residents.

Food substitutes - powders, freeze-dried foods, dried fruits and vegetables and cereals – are considered more optimal for ensuring a normal life for the population of Artsakh in an emergency situation.

OBJECTIVES

- Provide the population with food, taking into account international standards, expediency in terms of transportation and storage, as well as products' nutritional value in an emergency
- Create conditions for the transportation and storage of products
