

# ELECTRIC CARS FOR CITIZENS' URGENT HEALTH CARE NEEDS

## PROJECT SUMMARY

The most practical way to alleviate the paralyzed state of transportation in the Republic of Artsakh in the current situation is by utilizing electric vehicles, which are the most independent and optimal means of transportation.

They are vital for serving health care needs of those who require medical attention such as women in all stages of pregnancy or with young children, disabled and older people.

## PROBLEMS

- Provision of safe transportation for medical appointments for those in need
- Ensure mother and child care
